

ANDREAS MOKAM

Phone: 413-246-2071

Email: monkamtanyi@gmail.com

Springfield, Massachusetts

Professional Summary

Senior DevOps Engineer with 9+ years of experience designing, automating, and managing cloud-native infrastructure, CI/CD pipelines, and Kubernetes platforms. Experienced in building scalable AWS environments and deployment pipelines using Infrastructure as Code, container orchestration, and automation tools, supporting primarily Java-based applications, along with Node.js and .NET workloads. Focused on improving system reliability, deployment efficiency, and security through DevSecOps practices, observability, and automation.

.

Technical Skills

Cloud Platforms: AWS (EC2, EKS, IAM, VPC, S3, EBS, EFS, Route 53, ELB, CloudWatch)

CI/CD & DevOps Toolchain: Jenkins, Maven, SonarQube, Nexus

Infrastructure as Code: Terraform, HCP Terraform

Containers & Orchestration: Docker, Kubernetes (EKS), Helm

Configuration Management: Ansible

Monitoring & Logging: Prometheus, Grafana, CloudWatch, EFK/ELK

Security & Secrets Management: AWS IAM, AWS Secrets Manager, HashiCorp Vault

Programming & Scripting: Java, Groovy, Bash, Python, JSON, YAML

Tools & Methodologies: Git, Jira, Agile, Incident Management

Professional Experience

Senior DevOps Engineer

April 2016 – Present

Dominion Systems, Texas, USA (Remote)

- Design and implement scalable CI/CD pipelines using Jenkins integrated with GitHub, Maven, SonarQube, Nexus, Docker, and Kubernetes for Java, Node.js, and .NET application delivery.
- Develop and maintain reusable Jenkins Shared Libraries using Groovy to standardize pipeline workflows across teams

- Provision and manage AWS infrastructure using Terraform, including modular design, remote state, and HCP Terraform workflows
 - Architect secure AWS environments using VPCs, subnets, route tables, security groups, IAM roles, and network segmentation best practices.
 - Deploy and manage containerized applications on Amazon EKS using Docker, Amazon ECR, Kubernetes, and Helm.
 - Implement rolling, blue-green, and canary deployment strategies to enable zero-downtime releases and minimize deployment risk.
 - Automate infrastructure and configuration management using Ansible across Linux-based systems
 - Integrate AWS Secrets Manager, HashiCorp Vault, and IAM services for secure secrets management and dynamic credentials throughout the CI/CD lifecycle.
 - Monitor and optimize platform performance using Prometheus, Grafana, CloudWatch, and centralized logging through the EFK/ELK stack.
 - Troubleshoot production issues across AWS, Kubernetes, Linux, networking, CI/CD pipelines and application deployments to maintain high availability and operational excellence.
-

Salesforce Administrator

January 2013 – March 2016

Redmop Group

- Administer Salesforce CRM environments, including configuration, user management, and system support
 - Manage roles, profiles, permissions, workflows, reports, dashboards, and security settings
 - Perform data cleansing, migration, and validation across enterprise datasets
 - Support system integrations, enhancements, and automation of business processes
 - Provide Tier-2 support, troubleshooting, and end-user training to improve platform adoption
-

Project Manager

May 2009 – December 2012

Cameroon Development Corporation, Cameroon:

- Coordinate project planning, budgeting, and resource allocation across operational units
 - Prepare production forecasts, financial reports, and capital expenditure plans for management
 - Monitor project execution and ensure alignment with organizational objectives
 - Manage workforce training programs and operational team coordination
 - Maintain asset registers, operational records, and compliance documentation
-

Certification

- HashiCorp Certified: Terraform Associate (004)
- Salesforce Certified Administrator
- Salesforce Certified AI Associate
